

ARCS

Automated Reclaimed Condensate System

The Turn-Key HVAC condensate reclamation system for ZERO WATER LOSS

- Perfectly PH Balanced Product Water
- Ultra-Pure and Contaminant Free
- Zero Pathogens and Bacteria
- 1,440 GPD Capacity

The Problem:

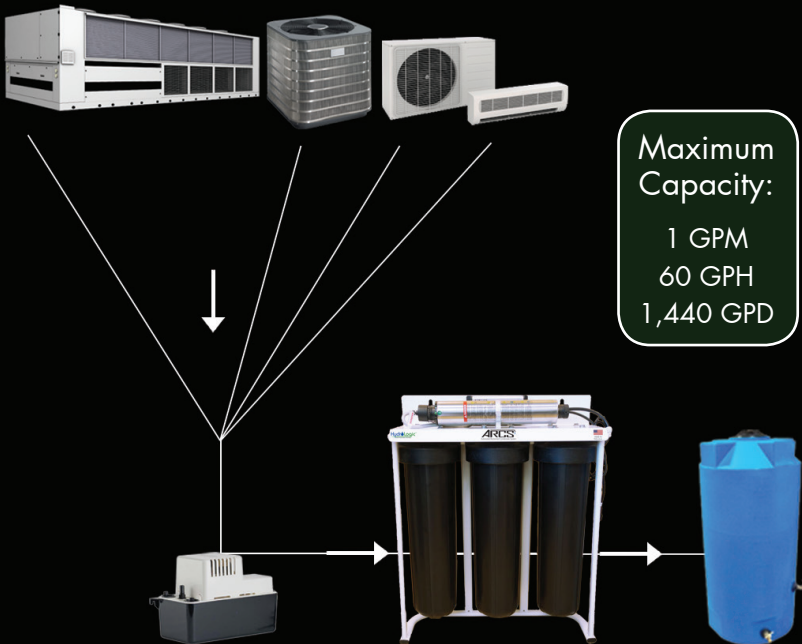

Condensate water is low in pH, contains harmful heavy metals and can harbor pathogens and bacteria. Condensate water should never be used for any purpose without proper treatment.

The Solution:

The HydroLogic Automated Reclaimed Condensate System (ARCS) works with any application that creates condensate water such as air conditioners and dehumidifiers, and successfully reclaims and purifies the condensate water that would normally go down the drain.

The product water from the ARCS is perfectly pH balanced, ultra-low PPM and completely free of contaminants, pathogens and bacteria.

ARCS product water can then be used for any application requiring pure water and is ideal for horticulture.

Turn-Key solution includes: Sump pump, 4 stage filter, floor stand and 20' of tubing
